Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19, drawn to a method for revascularization, classified in class 128, subclass 898.
- II. Claims 20-31, drawn to a method for coronary revascularization with a catheter, classified in class 128, subclass 898.
- III. Claims 32-59, drawn to an intracorporeal procedure with a tissue penetrating catheter, classified in class 606, subclass 191.
- IV. Claims 60-87, drawn to orienting catheter, classified in class 604, subclass 25.
- V. Claims 88-92, drawn to a compression apparatus, classified in class 606, subclass 151.

The inventions are distinct, each from the other because of the following reasons:

Inventions of group IV and groups II & III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product of the orienting catheter may be used for placement of a bifurcated vessel.

Inventions of group V and groups I-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04,

Art Unit: 3738

MPEP § 808.01). In the instant case the different inventions the compression device may be performed by hand.

Inventions of group I and group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the invention of group I may be performed with a trocar in a percutaneous procedure.

Inventions of group II and group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of group III may be performed on vessels other than coronary.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Robert Buyan (949.450.1750) on 9/24/02 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
